*Subject Letter no 62 dated the 21st October 1902 from the President of the Municipal Commission, Mysore City, submitting an estimate for Rs 4000/- for regrading the Bennecharadanahalli Channel

Note

With the above letter the President submits for sanction from State Funds an estimate for Rs 4000/- for regrading the Bennecharadanahalli Channel from the Culvert at the southern extremity of Devaraja street up to the old breach near the oil-mongers patch The President reports that the water in this channel formerly used to find its way along Vala street, Krishnaraja-hollar, cross the Chamaraj road near Kasipathi Lingaya Sastriyi's Layya (stables) and then join the Lakshmayankodi channel near Andapuram Krishna Iyengar's house

He further reports that 2 years ago the banks of that channel was diverted so as to run across the valuable mango garden belonging to Kalasiah and others and caused considerable damage to their property. The President adds that, as the original work was carried out by from Provincial Funds by the Superintending Engineer of Sanitary works, the present work may be similarly ordered to be done from that Fund. This office has no previous reference on the subject.

Submitted for orders as to whether the present reference may be transferred to the Chief Engineer for the needful.

The petn is not properly addressed.

vrj 4/11/02 Please recite 2nd Committee's order on petition Read No 2 696½ from Rangiah & Kalasiah on the subject; which may also be forwarded to the Chief Engineer & Secty P.W.D. for favour of disposal.

MYSORE CITY MUNICIPAL PRESIDENT'S OFFICE,

Dated 5th March 1901 ~~189~~.

To

The Secretary to the Government
of Mysore
General and Revenue Depts

SIR,

I have the honor to state that great difficulty is experienced in the City for want of water. All the tanks in the City have almost dried up. The Cauvery water which is now supplied at the rate of 10 gallons per head, is not sufficient to meet the demand, as it is used for all purposes in the City. If from unforeseen circumstances, the turbines fail to work at Balagola, there will be hardly any water in the City for domestic purposes. The Hekaratully tank hardly contains 2 feet of water.

Doddakere is the chief source of water for bathing and washing

washing purposes in the City. It was formerly fed by the Bennehadahully feeder, but since the above feeder was filled up on the ground of insanitation, the difficulty for water has increased. The Sewage water of the Southern and Western portions of the City was allowed to run into the Bennehadahully feeder channel before laying Sewage pipes and consequently the whole channel was in a very insanitary state. Now the drainage of the above mentioned portions have been completed and the Sewage water is allowed to discharge to the Poornaiah's nalla near the Peelkhana, thus there is now no danger in restoring the feeder.

Last year too the same difficulty was experienced. The Plague

Plague Commissioner accompanied by the Sanitary Superintending Engineer inspected the Beruwarduwa belly feeder and the tank; and ordered the restoration of the same at once. The work was started in earnest by the sanitary department, but was stopped all of a sudden.

The tank is quite dry and it is a good opportunity to remove the silt and form the proposed road connect. (1) ing Fort and Ittigegood.

I request you will kindly move the Government for the early (2) restoration of the above channel and the removal of silt from the bed of (3) the tank.

I have the honour to be,
Sir,
Your most obedient Servant
H Ramanathan
for President

THE CITY MUNICIPAL OFFICE

Dated 21st October 1902

From

M. Kantharaj Urs Esq B.A

President , City Municipal Commission ,

Mysore .

To

H.V. Nanjundayya Esq M.A.M.L

Secretary to the Government of Mysore

Revenue and General Departments .

Sir,

I have the honour to submit an estimate for Rs 400 for regrading Bennehardanahally channel from the culvert at the Southern extremity of Deevitege street pp to the old breach near the oil mongers patch . The water in Benneharadanahally channel formerly used to find its way along Nala street , Krishnaraj Mohalla , cross the Chamaraj road near Kasipathi Sastry's Laya and then join the Subrayan Kodi channel near Andapuram Krishna Iyengar's house and flow into the Doddakere Tank about 2 years ago , a tunnel across Chamaraj road was filled up , and the Bennehardanahally channel was regraded towards the South and a breach was effected for the discharge close to the culvert to the South of the Deevatige street . The water thus discharged rushes across the valuable mango garden belonging to Kalasiah and others and has caused considerable damage to their property . This work was carried by the superintending Engineer , Sanitary Division .

2. The proposed regrading of Benneharadanahally channel , for which an estimate is now submitted , is intended to divert this water into the Katty on the Nachanahally road near the oil mongers.

3.

3. As the original work was carried out from Provincial funds , the amount of estimate now submitted , may kindly be sanctioned out of the same funds .

I have etc

Sd K. Sreenivasa Rao

For President.
